

In the Specification:

Please change paragraph 2 of page 4 of the specification to read:

The cup well 16 has a plurality of structural ribs 24 along a top or upper portion of the cup well 16. The lower section of the cup well 16 has a plurality of compressible ribs 26. The structural ribs 24 provide structural support for the cup well 16 since the cup well 16 acts as the third leg of the tray 10. The compressible ribs 26 allow the cup well 16 to snugly hold a variety of different cup sizes without holding the cup to tight. The compressible ribs 26 are formed of a thinner plastic material "t" than the rest of the housing 10 "T".
